

Download Source

All of the source code necessary to build CDAT with the ioapiTools is available in the CDAT tar ball. You can download the source for CDAT at:

<http://www-pcmdi.llnl.gov/software-portal/cdat/download>

If you want to get the latest, separate packages for ioapiTools, you can download the individual tar balls:

- [IOAPI library](#) – this is my modification to the Fortran IOAPI library. I simplified the build process for CDAT and fink
- [pyIoapi](#) – the low level python interface to the IOAPI library. Basically a wrapping of some of the read and write functions
- [ioapiTools](#) – the high level python module that integrates IOAPI data (through pyIoapi) into cdms
